

SUBHAN AHMED

Software Engineer

Lahore, Pakistan | +923009717825 | subhan.ahmd@tuta.io

Ln@subhan-ahmd | github@subhan-ahmd | portfolio@subhan-ahmd.github.io

Software engineer with a bias for craft, building across the stack with deep roots in Flutter and a growing focus on backend systems and AI integration. I've shipped 7+ production apps across healthcare, education, and social platforms, architecting complex systems end to end, from real-time BLE monitoring and fraud prevention to AI powered mobile experiences. My background is mobile first, my ambition is full stack, and my standards don't shift.

WORK EXPERIENCE

Software Engineer

Jan 2025 - Present

Orbilon Technologies, Lahore, Pakistan

- Maintained and enhanced multiple production systems including mobile apps, full stack platforms, and business automation integrations across Monday.com, Sitelink, and Aircall.
- Led technical migration of AI Planner from Claude to OpenAI APIs with GPT-4 structured outputs and parallel function calling, achieving 50%+ latency reduction through optimized state management.
- Building full stack Sales Quotation System (React, ASP.NET Core, SQL Server) integrating three external APIs (Enapps ERP, KREO AI, WooCommerce) with rule based pricing engine and audit logging.

Mobile Application Developer

Apr 2024 - Dec 2024

AdSurge AI, Remote

- Developed and launched three cross platform Flutter apps (Side Hustle, AcademIQ, Diecarz) from concept to production, spanning gamified rewards, AI education, and social collection platforms.
- Architected secure authentication systems (Apple/Google Sign-In), AI conversational features with ChatGPT/Gemini APIs, and analytics integrations (Mixpanel, AppsFlyer, Adjust) across all products.
- Delivered scalable Firebase architectures with offline first support (Isar DB), responsive UI, and clean state management (Riverpod) while collaborating in remote agile sprints.

PROJECTS

Portfolio & Assets Platform, Flutter & Python

Dec 2025 - Present

- Built a two repo headless CMS with GitHub raw URLs as CDN, manifest driven asset resolution, and parallel data loading, achieving zero hosting costs for 100+ MB of assets.
- Developed an interactive Flutter Web SPA with Forge2D physics engine (draggable skill pills, throwable emojis), glassmorphism design system, command palette, and scroll reveal animations.
- Automated CV PDF generation from JSON data with sequential CI/CD pipelines via GitHub Actions and visibility flag filtering for independent CV and portfolio content control.

JackJack, Flutter & ESP32

Mar 2025 - Apr 2025

- Developed cross platform BLE companion app for child monitoring with real time audio streaming, threshold based alerts, and notification history.
- Architected dual mode system with seamless foreground/background state transfer and robust auto reconnection using flutter_reactive_ble.
- Built background service isolate with lifecycle aware state management for 24/7 monitoring.

AI Planner, Flutter

Mar 2025 - Aug 2025

- Led migration from Claude AI to OpenAI with structured outputs and parallel function calling (17 concurrent executions), reducing latency by 50%+.
- Rebuilt cross platform notifications system supporting recurring reminders with complex scheduling patterns.

- Fixed critical state handling bugs including data persistence and exception handling.

Caregiver Management App, Flutter

Jan 2025 - Mar 2025

- Added task management with recurring schedules, media attachments, and 9 language localization (including RTL).
- Extended push notification system with deep linking and FCM token lifecycle fixes.
- Resolved critical bugs in Firebase sync and authentication, improving user retention by 30%.

Diecarz, Flutter

Sep 2024 - Dec 2024

- Developed a social collection app for diecast enthusiasts with real time feed, follow/like system, and CSV bulk import.
- Built Python ETL scripts processing 57K rows, normalizing data, uploading images to Firebase Storage, batch importing via Parquet.
- Implemented advanced filtering across multiple metadata fields with optimized Firestore indexes and Mixpanel analytics.

Side Hustle, Flutter

May 2024 - Sep 2024

- Developed cross platform rewards app with AppsFlyer SDK for install attribution tracking.
- Engineered device fingerprinting with 15+ signals (IDFA, IP, VPN) for fraud prevention.
- Designed tiered redemption system for 12+ countries with WebSocket real time updates.

AcademiQ, Flutter

Apr 2024 - Jul 2024

- Built a multi modal AI education app with 20+ learning modes and seamless LLM migration (ChatGPT Gemini).
- Designed a multi input pipeline integrating OCR, speech-to-text, PDF extraction, and vision AI.
- Developed offline first architecture using Isar DB with Riverpod for persistent sessions.

Quick Care, Flutter

Jan 2024 - May 2024

- Developed a multi role healthcare platform (Patient/Doctor/Admin) with Flutter and Firebase for appointment booking.
- Integrated Paymob payment gateway, MailerSend SMTP for notifications, and location based doctor discovery.
- Integrated AI chatbot using GPT-3.5-turbo API and secure document storage.

EDUCATION

B.S. in Computer Science

Aug 2020 - Jun 2024

Khawaja Fareed University of Engineering & Information Technology, Rahim Yar Khan

CGPA: 3.53/4.00

SKILLS

Technical

Dart | Flutter | C# | C++ | ASP.NET Core | TypeScript | React | Python | JavaScript | Node.js | PostgreSQL | SQL Server | Firebase | Firestore | Isar DB | REST APIs | SOAP APIs | WebSockets | BLE | OpenAI APIs | Claude APIs | Git | GitHub Actions | CI/CD | Linux | FCM | Mixpanel | AppsFlyer | Google AppScript | n8n

Soft

Problem Solving | Automation Focused | Self Directed Learning | Technical Documentation
