

SUBHAN AHMED

Mobile Application Developer

Lahore, Pakistan | subhan.ahmd@tuta.io | +923009717825

Ln@subhan-ahmd | github@subhan-ahmd | portfolio@subhan-ahmd.github.io

Flutter developer specializing in AI-powered mobile apps with Dart, Firebase, BLE, and OpenAI technologies. Delivered production-ready solutions with focus on performance, usability, and clean architecture.

WORK EXPERIENCE

Software Engineer

Jan 2025 - Present

Orbilon Technologies, Lahore, Pakistan

- Developed Flutter mobile apps (Side Hustle, AcademiQ, Diecarz) with gamified rewards, AI-driven education, and social features.
- Implemented multi-platform authentication (Apple Sign-In, Google OAuth) and integrated analytics (Singular, AppsFlyer, Adjust).
- Built AI conversational features in AcademiQ using ChatGPT APIs with structured outputs, custom modes, and offline Isar DB support.

Mobile Application Developer

Apr 2024 - Dec 2024

AdSurge AI, Remote

- Contributed to AI Planner and Caregiver Management App using GPT-4.1 with structured outputs and parallel function calling.
- Migrated Claude 3.5/3.7 to OpenAI APIs with dynamic model switching for improved flexibility and response efficiency.
- Refactored state management, resolved core logic issues, and delivered polished UI with enhanced performance.

PROJECTS

JackJack, Flutter

Mar 2025 - Apr 2025

- Developed a BLE-based child monitoring app designed to alert parents if a baby or child is awake, crying, or noise levels rise above a threshold.
- Implemented full BLE scanning, pairing, and communication pipeline with support for reading/writing values and real-time sound level monitoring.
- Added live sound streaming from BLE device to phone and notifications for threshold breaches, ensuring timely alerts for caregivers.

AI Planner, Flutter

Mar 2025 - Present

- Worked on an existing AI-based scheduling and reminder app that extracts tasks, reminders, notes, and user features from chat conversations.
- Upgraded Claude 3.5 to 3.7 with JSON mode, then transitioned to OpenAI's ecosystem, starting with the Threads API, and later migrating to the Responses API with structured outputs and parallel function calling for greater flexibility and precision.
- Reduced response time by over 50% through API adjustments and refined state management, significantly enhancing performance and UX.
- Improved prompt design, fixed state handling bugs, and optimized memory usage for a more efficient and stable app.

Caregiver Management App, Flutter

Jan 2025 - Mar 2025

- Maintained and improved a healthcare app connecting caregivers and family members via chat with real-time translation support for multilingual users.
- Enabled task assignment to caregivers with auto-translation and tracking; allowed family collaboration by inviting multiple users.
- Fixed major visual glitches, logic issues, and ensured pixel-perfect UI across different screen sizes.

- Enhanced chat reliability and user interaction, resulting in 30% improvement in user retention and 40% drop in reported bugs.

Diecarz, Flutter

Sep 2024 - Dec 2024

- Developed a Firebase-backed toy car collection app with features like wishlist management, CSV import, and real-time feed from friends and the community.
- Added filtering, sorting, search, and CSV import (with images) using a custom-built script to populate Firebase with data and assets.
- Integrated Mixpanel analytics and implemented efficient Firestore rules and queries for scalable performance.
- Achieved 99.9% crash-free usage and significantly optimized load times and data sync across devices.

Side Hustle, Flutter

May 2024 - Sep 2024

- Built a rewards platform enabling users to earn points by installing and engaging with promoted games, with support for automated payouts.
- Integrated tracking SDKs (Singular, AppsFlyer, Adjust) to ensure accurate and real-time user acquisition attribution.
- Implemented secure authentication using Google and Apple sign-in, improving user onboarding and account protection.
- Designed a dynamic incentive system that encouraged consistent user participation and simplified reward distribution.

AcademiQ, Flutter

Apr 2024 - Jul 2024

- Developed an AI-powered educational chatbot with configurable modes (Essay, Poem, etc.) and support for various academic categories.
- Built custom session management with prompt tuning to maintain context and improve user interaction quality.
- Used Isar DB for efficient offline access to chat history and lightweight local storage.
- Applied smart state handling and caching to streamline API usage and reduce latency.

Quick Care, Flutter

Jan 2024 - May 2024

- Created a real-time appointment booking and management system using Firebase, supporting scheduling and payment flows.
- Built a notification system with Firebase Cloud Messaging and email alerts to keep patients and doctors informed.
- Enabled secure document storage and retrieval via Firebase Storage, and added location features using Flutter Maps.
- Focused on UX improvements to streamline booking processes and improve the reliability of appointment tracking.

EDUCATION

B.S. in Computer Science

Aug 2020 - Jun 2024

Khwaja Fareed University of Engineering & Information Technology, Rahim Yar Khan

CGPA: 3.53/4.00

SKILLS

Technical

Dart | Flutter | C# | C++ | ASP.NET Core | TypeScript | React | Python | JavaScript | Node.js | PostgreSQL | SQL Server | Firebase | Firestore | Isar DB | REST APIs | SOAP APIs | WebSockets | BLE | OpenAI APIs | Claude APIs | Git | GitHub Actions | CI/CD | Linux | FCM | Mixpanel | AppsFlyer | Google AppScript | n8n

Soft

Problem Solving | Automation Focused | Self Directed Learning | Technical Documentation
